1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the first and second pulse responses must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 11-22 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which

applicant regards as the invention. It is not clear what first and second pulse response is? Is it first and second detection pulse?

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 11-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over EP 0679967 in view of Ito both cited by applicant.

EP 0679967 disclose identifying the rotation of motor which includes a rotor provided with a motor coil driving at least one hand of a timepiece comprising steps of delivering to motor coil a drive voltage pulse and first detection pulse; delivering to coil a second detection pulse having polarity opposite to polarity of first detection pulse and determining position of rotor in accordance with first and second pulse responses to first and second detection pulses, see fig 4 P1, Px and Py and page 3 lines 35-43. EP 0679967 lacks disclosing stabilization pulse having polarity opposite to polarity of first drive voltage pulse. Ito discloses a stabilization voltage pulse having polarity opposite of polarity of first detection voltage pulse, see col 5 lines 55- col 6 lines 2 . It would have been obvious to one of ordinary skill in the art to combine the rotation of motor of EP 0679967 with stabilization pulse of Ito to prevent instability.

Art Unit: 2837

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Asana et al and Mandai et al disclose timepiece with detection signal.
